

RESET® Standards

RESET is a performance and data first standard for the built environment.

RESET focuses on performance metrics and collecting data via long-term, continuous monitoring.

RESET consists of five standards, one for **embodied** and four for **operating**. Each standard can be implemented separately and in any order.

Embodied

1. Embodied

- Carbon
- Circularity
- Health

2. Air

- PM_{2.5}
- CO₂
- TVOC

3. Water

- Consumption
- Production
- Water Quality

4. Energy

- Consumption
- Production

5. Waste

- Consumption
- Production

Operating
